

ClinixEHR: Core Feature Set

An enterprise-grade, modern Electronic Health Record (EHR) system designed for speed, clinical safety, and premium user experience.

Security & Access Control

Role-Based Access (RBAC): Distinct permissions for Doctors, Nurses, Admins, and Staff.

Secure Authentication: Encrypted login system powered by Google Firebase.

Protected Clinical Modules: Sensitive data (Pharmacy, Labs, Billing) is restricted by user role.

Executive Dashboard

Real-Time Analytics: Live tracking of patient volume and daily appointments.

Smart Action Hub: One-click shortcuts customized to the user's role.

Active Lab Alerts: Automatically surfaces unresolved abnormal or critical lab results, clearing them instantly when normal follow-ups are recorded.

Patient Management

Comprehensive Profiles: Centralized demographic and medical history data.

Smart Search: Lightning-fast patient lookup with autocomplete.

Allergy Tracking: Permanent visibility of patient allergies to prevent medical errors.

Clinical Documentation (SOAPIE)

Vitals Flowsheet: Track BP, HR, Temp, RR, O₂ Sat, and Weight over time.

Structured Exams: Clean interface for Chief Complaint, History (HPI), Physical Exam, and Plan.

ICD-10 Integration: Built-in autocomplete for standard international diagnosis codes.

Immunization Logs: Track vaccine history and administration dates.

Document Vault: Upload and attach images or PDF files directly to patient records.

Pharmacy & Clinical Safety Engine

Real-Time Prescribing: Clean interface to prescribe, dose, and manage active vs. completed medications.

Drug-Drug Interactions: Advanced "Soft Stop" safety engine warns doctors of dangerous combinations (e.g., Warfarin + Aspirin) before saving. (This is limited to 29 combination)

Clinical Overrides: Forces doctors to type a medical rationale if bypassing a high-severity interaction warning.

Drug-Allergy Alerts: Automatically blocks prescriptions if the patient has a documented allergy.

Laboratory & Diagnostics

Structured Panels: Built-in templates for common tests (CBC, CMP, Lipid Panel, Urinalysis).

Auto-Flagging: Automatically highlights abnormal or critical results based on standard reference ranges.

Color-Coded Status: Visual badges (Green/Yellow/Red) for instant triage of lab results.

Scheduling & Flow

Appointment Hub: Track patient visits by date and time.

Status Management: Live tracking of patient flow (Scheduled → Arrived → Completed).

Billing & Financials

Revenue Tracking: Instantly view Total Outstanding vs. Total Collected balances.

Service Categorization: Bill for Consultations, Labs, Pharmacy, or Procedures.

Flexible Payments: Support for full or partial payments, Cash, HMOs, PhilHealth, and E-Wallets.

Premium UI/UX (Amber Mirage Engine)

Mobile-First Design: 100% responsive interface works flawlessly on smartphones, iPads, and desktops.

Cinematic Dark Mode: Features a proprietary, smooth "Eye Blink" animation when toggling themes.

Glassmorphism Aesthetic: High-end, frosted-glass design elements usually reserved for premium consumer apps.

Skeleton Loaders: Prevents jarring screen jumps while data loads from the cloud.

ClinixEHR: Role-Based Access Control (RBAC)

ClinixEHR enforces strict data security using a Role-Based Access Control system. Users are assigned one of four roles, which dictates exactly which modules they can view and what clinical actions they can perform.

System Administrator (admin)

The Administrator has unrestricted access to the entire system for management and oversight.

Access: Dashboard, Patients, Appointments, Laboratory, Pharmacy, Billing.

Capabilities:

Can view and edit all patient records.

Can perform all clinical actions (Prescribe, Order Labs, Write Exams).

Can manage the billing and financial modules.

Restrictions: None.

Physician (doctor)

Physicians have full clinical authority but are restricted from the financial/billing backend to ensure focus on patient care.

Access: Dashboard, Patients, Appointments, Laboratory, Pharmacy.

Capabilities:

Examinations: Create and edit clinical SOAP notes and diagnoses.

Pharmacy: Full prescribing authority. Can bypass Drug-Drug Interaction (DDI) alerts by providing a mandatory clinical rationale. Can discontinue active medications.

Diagnostics: Order and log laboratory results.

Vitals: View and log patient vitals.

Restrictions: Cannot access the Billing/Financial modules.

Registered Nurse (nurse)

Nurses handle patient triage, clinical execution, and monitoring, but lack diagnostic or initial prescribing authority.

Access: Dashboard, Patients, Laboratory, Pharmacy.

Capabilities:

Vitals & Triage: Primary role for logging patient vitals (BP, HR, Temp, etc.).

Examinations: Can write initial nursing/triage assessments.

Diagnostics: Can log and update laboratory results.

Medication Management: Can view all prescriptions and Discontinue active medications.

Restrictions:

Cannot prescribe new medications.

Cannot access the Billing module.

Cannot access the master Appointments calendar.

Front Desk / Reception (staff)

Administrative staff handle patient flow, scheduling, and payments, with zero access to sensitive clinical execution modules.

Access: Dashboard, Patients (Demographics only), Appointments, Billing.

Capabilities:

Patient Flow: Register new patients and update demographics.

Scheduling: Full control over the master Appointments calendar (schedule, cancel, mark as arrived).

Financials: Full access to the Billing module to record charges, accept payments (Cash, HMO, etc.), and track outstanding balances.

Restrictions:

Cannot access the Pharmacy or Laboratory modules.

Cannot view or log clinical Vitals, Examinations, or Prescriptions.
